

Triumph Speed Triple

- Sports chassis delivers class-leading handling
- Standard fit key-coded immobilizer for added security
- ABS brake option available
- Full range of performance accessories available
- Two-year unlimited mileage warranty

Triumph's most iconic model, the Speed Triple delivers a new level of handling and composure to the super naked class.

With the sharpest and most aggressive look yet from a Speed Triple, and more power from the legendary 1050cc triple, the latest model is adding to the legacy that has seen over 70,000 Speed Triples sold since its introduction in 1994.

At 471 lbs. fully fueled, the latest Speed Triple is over six lbs. lighter than the previous model. Front and rear wheels are each over two lbs. lighter, while the narrower frame and improved packaging allows for increased ground clearance, making the machine feel incredibly light and nimble. The new 43mm forks offer excellent control and plushness and are fully adjustable for preload, rebound and compression damping on both legs. Brembo radial caliper brakes grip 320mm rotors, with the option of Triumph's anti-lock braking system available.

The aggressive body panels and heavily sculpted seat accentuate the Speed Triple's street fighting stance and complement the twin headlights. Color-coded radiator cowls are a new feature and sport stylish Speed Triple decals. Three color options are available: Crystal White, Phantom Black and Diablo Red, with color-coded flyscreen, seat cowl and belly pan available as genuine Triumph accessories.

The 32.5 seat height gives a confidence-inspiring riding position, placing the rider further forward and inspiring much more confidence when carving through twisting corners, making the Speed Triple more accessible and comfortable than before.

Triumph's 1050cc triple endows the Speed Triple with a mighty 133bhp at the top end. With Triumph's latest generation ECU software and modified exhaust system, the new Speed Triple delivers its raw power in a satisfyingly refined manner. The 2012 Speed Triple includes high-specification features like fat alloy handlebars and a coded-key immobilizer. Improved instrumentation includes a digital speedometer, fuel gauge, trip computer, analog tachometer, lap timer, programmable gear change lights and service interval announcement display.

Triumph's accessories division has also developed a full range of official accessories for the new Speed Triple. Highlights include performance-enhancing slip-on exhausts and a full three-into-one "low boy" exhaust system developed in conjunction with Arrow Special Parts. A tire pressure sensor kit is also available for the first time on the Speed Triple.

A full range of soft luggage and gel comfort seats has been developed to increase the practicality of the Speed Triple.
